

INTRODUCTION

- HSC[®] employed state-of-the-art computer hardware, CAD-CAM and FEM software complemented by worldwide experience to engineer its Premium Connection system.
- HSC[®] uses the latest computerized machine-tool technology to manufacture its Premium Connection system.
- HSC[®] Premium Connection system performs successfully down-hole in aggressive conditions throughout the world.
- HSC[®] offers a full range of Premium Threaded and Coupled options for all your applications.
- HSC[®] has supplied millions of feet, hundreds of thousands of joints in various sizes and weights of carbon and 13% Chromium steels, both tubing and casing.

HSC PREMIUM CONNECTION

The HSC[®] Premium Connection threaded and coupled system was developed to meet the needs of the Oil and Gas Industry. The design phase of HSC[®] Premium Thread Connection System employs various computer-oriented tools. Software images are created and subjected to Finite Element Analysis validated by the production of prototypes submitted to a programme of stringent mechanical testing (developed from API RP5C5). These tools, in addition to classical design methodology, are used to optimize crucial features of the joint (such as thread & seal interference and geometry) prior to "cutting metal". This highly successful premium connection is manufactured using the most modern machine-tool technology and gauging system. Maximization of product control and the accompanying close tolerancing ensure ultimate joint performance through consistency in make-up, elimination of snagging and improved running times. Verification of results of multiple made-up joints through in-field monitoring (using specialized torque-monitoring computer equipment) demonstrates excellent correlation with analysis predictions. The above improvements to an already proven concept have quickly established HSC[®] as a consistent, reliable, and cost effective threaded and coupled Premium Connection system.

TECHNICAL INFORMATION

The HSC[®] Premium Connection is a gas tight threaded and coupled tubing and casing system that is interchangeable with other premium connections with similar thread profiles.

Close Tolerances

HSC[®] uses state-of-the-art CNC machine tools and proven manufacturing systems to produce a high quality and close tolerance product, minimizing field problems.

Smooth Running

Consistency in manufacturing of HSC[®] products ensures repeatable make-up readings, both in thread and seal torque, resulting in improved running times and less snagging.

Inside the Joint

The 6 degree machined taper of the pin profile mates with the closely controlled bore of the HSC[®] coupling to allow very smooth product flow and no hang-ups of down-hole tooling.

Gas Tight Seals

Both HSC[®] tubing and casing metal to metal seal and torque shoulders ensure stored energy within the connection.

Testing

The HSC[®] tubing and casing performance and its interchangeability with other premium connections with similar thread profiles are fully proven by a stringent mechanical testing programme using helium-based pressure testing with multiple make and break checks (developed from API RP5C5). The tests have been supported by a series of rigorous field trials.

The Pin Thread

The HSC[®] pin has the classic Buttress profile, 3° load flank and 3/4" per foot taper with full thread "run-out".

The Coupling

The HSC[®] coupling is available in outside diameters to meet the following specifications:

- ES** Equal Strength
- R** Regular
- SC** Special Clearance
- SB** Special Bevel

The long coupling design ensures that the pin "run-out" thread on the pipe is always contained within the coupling thus ensuring that the tensile strength of the HSC[®] joint is at least equal to the pipe body. The long J-Section allows greater distribution of stress.

Anti-Galling Treatment

A high specification HSC[®] anti-galling surface treatment is applied to both pin and coupling. Extensive testing has proven that the occurrence of galling is reduced to an absolute minimum for assemblies of components using this preparation.

The Gauging System

The HSC[®] Gauging System, in addition to standard API 5B gauging methods, uses a precision-ground Certified Standard as the reference for the verification of the connection's dimensions.

Pin - The thread root and seal diameters are transferred from the Certified Standard to the precision-ground thread profile rolls and contact points. This gauge is then used to check the pin end.

Box - The thread crest and seal diameters are transferred from the Certified Standard to the precision-ground cylinder rolls and contact points. This gauge is then used to check the coupling.

The above system affords total control in the verification of both thread and seal interference.

The Joint in the Field

HSC[®] design ensures that the pin and coupling together are as strong as the pipe body itself and offer at least equal resistance to bending, tension, compression, internal and external pressure.

Pipe Protection

HSC[®] Tubing and Casing are externally coated with a clear mill varnish suitable for outdoor storage.

Thread Protection

HSC[®] Tubing and Casing threads are protected with polymer or polymer and steel reinforced thread protectors in types to meet customer requirements.

DIMENSIONS AND WEIGHTS

- **Dimension Symbols**

- D** = Outside Diameter of pipe (inches)
- t** = Wall thickness of pipe (inches)
- d** = Nominal inside diameter of pipe (inches)
- d₁** = Inside diameter of coupling (inches)
- W** = Outside diameter of regular coupling (inches)
- W_c** = Outside diameter of special clearance coupling (inches)
- L₄** = Minimum thread length (inches)
- N_L** = Length of coupling (inches)
- M_L** = Make up loss (inches)
- d^c** = Inside diameter of the coupling at root of thread at the critical cross-section
- e_w** = Weight gain or loss due to end finishing
- L^b** = Total length of bored section of assembled joint

- **Dimensional Calculations**

Drift Diameter Formulae:

D	Drift Diameter
2 7/8" or less	d - 0.094"
3 1/2" to 8 5/8"	d - 0.125"
9 5/8" to 13 3/8"	d - 0.157"

(Drift size formulas taken from API 5CT Table 5.1)

- **Formula for Cross Section:**

Pipe Body: $S = \pi/4 (D^2 - d^2) \Pi$

Critical Cross Section of Couplings

Regular Couplings	Special Clearance Couplings
$S' = \pi/4 (W^2 - d^{c2})$	$S' = \pi/4 (W_c^2 - d^{c2})$

- **Calculations of Weight:**

Plain End Pipe Weight :

$W_{pe} = 10.68(D - t)$
(Calculation taken from API Buln. 5C3)

Weight gain or loss due to end finishing:

$e_W = A - B - L_4$	$W_{pe/12}$
$A = 0.2833 N_L$	$\pi/4 (W^2 - D^2)$
$B = 0.2833 L^b$	$\pi/4 (d_1^2 - D^2)$

Although prepared with great care and attention, the technical information appearing in this catalogue is for general information only. HSC® makes no representation or warranty for this information and customers should therefore carry out all necessary investigations to choose for themselves the technical solution suited to the installation and operating conditions under which our products will be used.

SIZES & GRADES OF HSC TUBING AND CASING

HSC[®] Tubing is available in sizes 2 3/8” to 4 1/2” and in Range 2 or 3

HSC[®] Casing is available in sizes 5” to 13 3/8” and in Range 2 or 3

HSC[®] Pup Joints are available for all sizes in lengths as required
